## CHAPTER 2

### REPORTING INTERCORPORATE INVESTMENTS AND CONSOLIDATION OF WHOLLY OWNED SUBSIDIARIES WITH NO DIFFERENTIAL

#### ANSWERS TO QUESTIONS

**Q2-1** (a) An investment in the voting common stock of another company is reported on an equity-method basis when the investor is able to significantly influence the operating and financial policies of the investee.

(b) The cost method normally is used for investments in common stock when the investor does not have significant influence and for investments in preferred stock and other securities. The cost method may also be used by the parent company for bookkeeping purposes when the investor owns a controlling interest because the investment account is eliminated in the consolidation process.

**Q2-2A** Significant influence occurs when the investor has the ability to influence the operating and financial policies of the investee. Representation on the board of directors of the investee is perhaps the strongest evidence, but other evidence such as routine participation in management decisions or entering into formal agreements that give the investor some degree of influence over the investee also may be used.

**Q2-3A** Equity-method reporting should not be used when (a) the investee has initiated litigation or complaints challenging the investor's ability to exercise significant influence, (b) the investor signs an agreement surrendering important shareholder rights, (c) majority ownership is concentrated in a small group that operates the company without regard to the investor's desires, (d) the investor is not able to acquire the information from the investee, or (e) the investor tries and fails to gain representation on the board of directors.

**Q2-4** The balances will be the same at the date of acquisition and in the periods that follow whenever the cumulative dividends paid by the investee equal or exceed the investee's cumulative earnings since the date of acquisition. The latter case assumes there are no other adjustments needed under the equity method for amortization of differential or other factors.

**Q2-5** When a company has used the cost method and purchases additional shares which cause it to gain significant influence, a retroactive adjustment is recorded to move from a cost basis to an equity-method basis in the preceding periods. Dividend income is replaced by income from the investee and dividends received are treated as an adjustment to the investment account.

**Q2-6** An investor considers a dividend to be a liquidating dividend when the cumulative dividends received from the investee exceed a proportionate share of the cumulative earnings of the investee from the date ownership was acquired. For example, an investor would consider a dividend to be liquidating if it purchases shares of another company in early December and receives a dividend at year-end substantially in excess of its portion of the investee's net income for December.

**Q2-7** Liquidating dividends decrease the investment account in both cases. All dividends are treated as a reduction of the investment account when equity-method reporting is used. When the cost method is used and dividends are received in excess of a proportionate share of investee earnings since acquisition, they are treated as a reduction of the investment account as well.

**Q2-8** A dividend is treated as a reduction of the investment account under equity-method reporting. Unless it is a liquidating dividend, it is treated as dividend income under the cost method.

**Q2-9** Dividends received by the investor are recorded as dividend income under both the cost and fair value methods. The change in the fair value of the shares held by the investor is recorded as an unrealized gain or loss under the fair value method. The fair value method differs from the equity method in two respects. Under the equity method the investor's share of the earnings of the investee are included as investment income and dividends received from the investee are treated as a reduction of the investment account.

**Q2-10A** When the modified equity method is used, a proportionate share of subsidiary net income and dividends is recorded on the parent's books and an appropriate amount of any differential is amortized each period. In some situations, companies also choose not to make adjustments for intercompany profits and the amortization of the differential. Under the fully adjusted equity method, the parent's books also are adjusted for unrealized profits and any other items that are needed to bring the investor's net income into agreement with the income to the controlling interest that would be reported if consolidation were used.

**Q2-11** A one-line consolidation implies that under equity-method reporting the investor's net income and stockholders' equity will be the same as if the investee were consolidated. Income from the investee is included in a single line in the investor's income statement and the investment is reported as a single line in the investor's balance sheet.

**Q2-12A** The term modified equity method generally is used when the investor records its portion of the reported net income and dividends of the investee and amortizes an appropriate portion of any differential. Unlike the fully adjusted equity method, no adjustment for unrealized profit on intercompany transfers normally is made on the investor's books. (In some situations, companies also choose not to amortize the differential.) When an investee is consolidated for financial reporting purposes, the investor may not feel it is necessary to record fully adjusted equity method entries on its books since income from the investee and the balance in the investment account must be eliminated in preparing the consolidated statements.

**Q2-13A** The investor reports a proportionate share of an investee's extraordinary item as an extraordinary item in its own income statement.

**Q2-14** An adjusting entry is recorded on the company's books and causes the balances reported by the parent or subsidiary company to change. Consolidation entries, on the other hand, are not recorded on the books of the companies. Instead, they are entered in the consolidation worksheet so that when the amounts included in the consolidation entries are applied, the appropriate balances for the consolidated entity are reported.

**Q2-15** Each of the stockholders' equity accounts of the subsidiary is eliminated in the consolidation process. Thus, none of the balances is included in the stockholders' equity accounts of the consolidated entity. That portion of the stockholders' equity claim assigned to the noncontrolling shareholders is reported indirectly in the balance assigned to the noncontrolling shareholders.

**Q2-16** Additional entries are needed to eliminate all income statement and retained earnings statement effects of intercorporate ownership and any transfers of goods and services between related companies.

**Q2-17** Separate parts of the consolidation worksheet are used to develop the consolidated income statement, retained earnings statement, and balance sheet. All consolidation entries needed to complete the entire worksheet normally are entered before any of the three statements are prepared. The income statement portion of the worksheet is completed first so that net income can be carried forward to the retained earnings statement portion of the worksheet. When the retained earnings portion is completed, the ending balances are carried forward and entered in the consolidated balance sheet portion of the worksheet.

**Q2-18** None of the dividends declared by the subsidiary are included in the consolidated retained earnings statement. Those which are paid to the parent have not gone outside the consolidated entity and therefore must be eliminated in preparing the consolidated statements.

**Q2-19** Consolidated net income includes 100 percent of the revenues and expenses of the individual consolidating companies arising from transactions with unaffiliated companies.

**Q2-20** Consolidated retained earnings is that portion of the undistributed earnings of the consolidated entity accruing to the parent company shareholders.

**Q2-21** Consolidated retained earnings at the end of the period is equal to the beginning consolidated retained earnings balance plus consolidated net income attributable to the controlling interest, less consolidated dividends. Under the fully adjusted equity method, consolidated retained earnings should equal the parent company's retained earnings.

**Q2-22** The retained earnings statement shows the increase or decrease in retained earnings during the period. Thus, income for the period is added to the beginning balance and dividends are deducted in deriving the ending balance in retained earnings. Because the consolidation worksheet includes the retained earnings statement, the beginning retained earnings balance must be entered in the worksheet.

## **SOLUTIONS TO CASES**

### **C2-1A Choice of Accounting Method**

a. The equity method is to be used when an investor has significant influence over an investee. Significant influence normally is assumed when more than 20 percent ownership is held. Factors to be considered in determining whether to apply equity-method reporting include the following:

1. Is the investee under the control of the courts or other parties as a result of filing for reorganization or entering into liquidation procedures?
2. Does the investor have representation on the board of directors, or has it attempted to gain representation and been unable to do so?
3. Has the investee initiated litigation or complaints challenging the investor's ability to exercise significant influence?
4. Has the investor signed an agreement surrendering its ability to exercise significant influence?
5. Is majority ownership concentrated in a small group that operates the company without regard of the wishes of the investor?
6. Is the investor able to acquire the information needed to use equity-method reporting?

b. When subsidiary net income is greater than dividends paid, equity-method reporting is likely to show a larger reported contribution to the earnings of Slanted Building Supplies. If 20X4 earnings are negative or less than dividends distributed in 20X4, the cost basis is likely to result in a larger contribution to Slanted's reported earnings.

c. As the investor uses more of its resources to acquire ownership of the investee, and as the investor has a greater share of the investee's profits and losses, the success of the investee's operations may have more of an impact on the overall financial well-being of the investor. In many cases, the investor will want to participate in key decisions of the investee once the investor's ownership share reaches a certain level. Also, use of the equity method eliminates the possibility of the investor manipulating its own income by influencing investee dividend distributions, as might occur under the cost method.

## C2-2 Intercorporate Ownership

### MEMO

To: Chief Accountant  
Most Company

From: \_\_\_\_\_, CPA

Re: Equity Method Reporting for Investment in Adams Company

The equity method should be used in reporting investments in which the reporting company has a significant influence over the operating and financing decisions of another company. In this case, Most Company holds 15 percent of the voting common stock of Adams Company and Port Company holds an additional 10 percent. During the course of the year, both Most and Port are likely to use the cost method in recording their respective investments in Adams. However, when consolidated statements are prepared for Most, the combined ownership must be used in determining whether significant influence exists. Both direct and indirect ownership must be taken into consideration. [ASC 323-10-15-6 through 15-8]

A total of 15 percent of the voting common stock of Adams is held directly by Most Company and an additional 10 percent is controlled indirectly through Most's ownership of Port Company. Equity-method reporting for the investment in Adams Company therefore appears to be required.

If the cost method has been used by Most and Port in recording their investments during the year, at the time consolidated statements are prepared, adjustments must be made to (a) increase the balance in the investment account for a proportionate share of the investee's reported net income (25 percent) and reduce the balance in the investment account for a proportionate share of the dividend paid by the investee, (b) include a proportionate share of the investee's net income in the consolidated income statement, and (c) delete any dividend income recorded by Most and Port.

### C2-3A Application of the Equity Method

MEMO

To: Controller  
Forth Company

From: \_\_\_\_\_, CPA

Re: Equity Method Reporting for Investment in Brown Company

This memo is prepared in response to your request regarding use of the cost or equity methods in accounting for Forth's investment in Brown Company.

Forth Company held 85 percent of the common stock of Brown Company prior to January 1, 20X2, and was required to fully consolidate Brown Company in its financial statements prepared prior to that date [ASC 810]. Forth now holds only 15 percent of the common stock of Brown. The cost method is normally used in accounting for ownership when less than 20 percent of the stock is directly or indirectly held by the investor.

Equity-method reporting should be used when the investor has "significant influence over operating and financing policies of the investee." While 20 percent ownership is regarded as the level at which the investor is presumed to have significant influence, other factors must be considered as well. [ASC 323-10-15-6 through 15-8]

Although Forth currently holds only 15 percent of Brown's common stock, the other factors associated with its ownership indicate that Forth does exercise significant influence over Brown. Forth has two members on Brown's board of directors, it purchases a substantial portion of Brown's output, and Forth appears to be the largest single shareholder by virtue of its sale of 10,000 shares to each of 7 other investors.

These factors provide strong evidence that Forth has significant influence over Brown and points to the need to use equity-method reporting for its investment in Brown. Your office should monitor the activities of the standard setting bodies with respect to consolidation standards [[www.fasb.org](http://www.fasb.org)]. Active consideration is being given to situations in which control may be exercised even though the investor does not hold majority ownership. It is conceivable that your situation might be one in which consolidation could be required.

ASC 810

#### **C2-4 Need for Consolidation Process**

After the financial statements of each of the individual companies are prepared in accordance with generally accepted accounting principles, consolidated financial statements must be prepared for the economic entity as a whole. The individual companies generally record transactions with other subsidiaries on the same basis as transactions with unrelated enterprises. In preparing consolidated financial statements, the effects of all transactions with related companies must be removed, just as all transactions within a single company must be removed in preparing financial statements for that individual company. It therefore is necessary to prepare a consolidation worksheet and to enter a number of special journal entries in the worksheet to remove the effects of the intercorporate transactions. The parent company also reports an investment in each of the subsidiary companies and investment income or loss in its financial statements. Each of these accounts must be eliminated as well as the stockholders' equity accounts of the subsidiaries. The latter must be eliminated so that only the parent's equity remains. This is because only the parent's ownership is held by parties outside the consolidated entity.

## C2-5 Account Presentation

### MEMO

To: Chief Accountant  
Prime Company

From: \_\_\_\_\_, Accounting Staff

Re: Combining Broadly Diversified Balance Sheet Accounts

Many manufacturing and merchandising enterprises excluded finance, insurance, real estate, leasing, and perhaps other types of subsidiaries from consolidation prior to 1987 on the basis of “nonhomogeneous” operations. Companies generally argued that the accounts of these companies were dissimilar in nature and combining them in the consolidated financial statements would mislead investors. **ASC 810** specifically eliminated the exception for nonhomogeneous operations. **ASC 810-10-65-1** affirms the requirement for consolidating entities in which a controlling financial interest is held.

Prime Company controls companies in very different industries and combining the accounts of its subsidiaries may lead to confusion by some investors; however, it may be equally confusing to provide detailed listings of assets and liabilities by industry or other breakdowns in the consolidated balance sheet. The actual number of assets and liabilities presented in the consolidated balance sheet must be carefully considered, but is the decision of Prime’s management.

It is important to recognize that the notes to the consolidated financial statements are regarded as an integral part of the financial statements and Prime Company is required to include in its notes to the financial statements certain information on its reportable segments [**ASC 280-10**]. Because of the diversity of its ownership, Prime may wish to provide more than the minimum disclosures specified in the guidance. Segment information appears to be used quite broadly by investors and permits the company to provide sufficient detail to assist the financial statement user in gaining a better understanding of the various operating divisions of the company.

You have requested information on those situations in which it may not be appropriate to combine similar appearing accounts of two or more subsidiaries. The following is a partial listing of such situations: (a) the accounts of a subsidiary should not be included along with other subsidiaries if control of the assets and liabilities does not rest with Prime Company, as when a subsidiary is in receivership; (b) while the assets and liability accounts of the subsidiary should be combined with the parent, the equity account balances should not; (c) negative account balances in cash or accounts receivable should be reclassified as liabilities rather than being added to the positive balances of other affiliates if there is no right of offset in the underlying bank accounts, and (d) assets pledged for a specific purpose and not available for other use by the consolidated entity generally should be separately reported.

## C2-6 Consolidating an Unprofitable Subsidiary

MEMO

TO: Chief Accountant  
Amazing Chemical Corporation

FROM: \_\_\_\_\_, Accounting Staff

Re: Consolidation of Unprofitable Boatyard

This memo is intended to provide recommendations on the presentation of the boatyard in Amazing Chemical's consolidated financial statements. Amazing Chemical Corporation currently has full ownership of the boatyard and should fully consolidate the boatyard in its financial statements. Consolidated statements should be prepared when a company directly or indirectly has a controlling financial interest in one or more other companies. [ASC 810-10-10-1 and ASC 810-10-65-1]. Amazing Chemical appears to be following generally accepted accounting procedures in fully consolidating the boatyard in its financial statements and should continue to do so.

The operations of the boatyard appear to be distinct from the other operations of the parent company and its losses appear to be sufficient to establish it as a reportable segment [**ASC 280-10-50**]. While the operating losses of the boatyard may not be evident in analyzing the consolidated income statement, a review of the notes to the consolidated statements should provide adequate disclosure of its operations as a reportable segment. The financial statements for the current period should contain these disclosures and if prior period statements have not included the boatyard as a reportable segment it may be necessary to restate those statements.

Failure of the president of Amazing Chemical to receive approval by the board of directors for the purchase of the boatyard and his subsequent actions to keep information about its operations from the board members appears to be a serious breach of ethics. These actions by the president should immediately be brought to the attention of the board of directors for appropriate action by the board.

## SOLUTIONS TO EXERCISES

### E2-1 Multiple-Choice Questions on Use of Cost and Equity Methods [AICPA Adapted]

1. **a** – Cash dividends received will never cause an *increase* in the investment account under either method.  
  
(b) *Incorrect.* A cash dividend is recorded as dividend income and does not affect the investment account under the cost method. Under the equity method, dividends *reduce* the investment account.  
(c) *Incorrect.* A cash dividend is recorded as dividend income and does not affect the investment account under the cost method.  
(d) *Incorrect.* Under the equity method, dividends *reduce* the investment account.
  
2. **a** – Because the ownership in Amal Corporation is less than 20%, the cost method should be applied. Accordingly, the \$1,500 dividend received from Amal is recorded as dividend revenue.  
  
(b) *Incorrect.* Stock dividends are not recorded as income.  
(c) *Incorrect.* The cash dividend received from B&K is not recorded as dividend revenue because it is accounted for under the equity method.  
(d) *Incorrect.* The stock dividend and cash dividend from B&K are not recorded as dividend revenue.
  
3. **a** – Under the equity method, net income increases the investment account while dividends decrease it. Because net income was greater than the dividends declared, this results in a net increase in the investment account. Under the cost method, the investment would not be altered, and thus would be lower than it would be under the equity method.  
  
(b) *Incorrect.* This would only be true if the dividends were less than the net income.  
(c) *Incorrect.* It doesn't matter when the dividends are paid; as soon as they are declared they act as a reduction to the investment under the equity method.  
(d) *Incorrect.* It doesn't matter when the dividends are paid; as soon as they are declared they act as a reduction to the investment under the equity method.
  
4. **b** – Under the equity method the company records a share of the affiliate net income as income for the company. This increases the net income of the company which increases earnings per share.  
  
(a) *Incorrect.* An increase in income affects long-term assets, not current assets or current liabilities, so it would have no effect on the current ratio.  
(c) *Incorrect.* The assets would be higher so asset turnover would decrease. No other turnover ratios would be affected.  
(d) *Incorrect.* The affiliate company's profitability would not decrease the book value per share of the company, it would increase it since retained earnings would increase with the recognition of income from the subsidiary.

5. **d** – Since these are liquidating dividends they would decrease the investment account under the cost method and decrease the investment account under the equity method.
- (a) *Incorrect.* Dividends usually decrease the investment account under the equity method so there would be an effect.
- (b) *Incorrect.* Dividends usually decrease the investment account under the equity method so there would be an effect.
- (c) *Incorrect.* Since these are liquidating dividends they would decrease the investment account under the cost method so there would be an effect.
6. **d** – The amount of dividends not in excess would be considered dividend income.
- (a) *Incorrect.* There would be at least some dividend income recorded.
- (b) *Incorrect.* Since these are liquidating dividends a portion of the dividends will go to reduce the investment account thus not all of the dividends received will be income.
- (c) *Incorrect.* The portion of dividends received in excess of the share of earnings would cause a reduction in the investment account.

## E2-2 Multiple-Choice Questions on Intercorporate Investments

1. **b** – Equity method reporting is used when an investor gains significant influence over the operating and financing decisions of the investee. Typically, this is satisfied by maintaining 20% or more of the voting stock, but can also be obtained by other contractual obligations or circumstances.
- (a) *Incorrect.* Voting shares can be obtained without gaining significant influence (i.e. less than 20%) and thus the equity method is not typically used.
- (c) *Incorrect.* Purchasing goods and services would not constitute significant influence over the company, and thus does not result in the equity method being applied.
- (d) *Incorrect.* This would result in a write-down of the investment, and does not correlate to the use of the equity method.
2. **c** – Under the equity method, net income from the investee causes an increase to the investment, while dividends declared by the investee causes a reduction.
- (a) *Incorrect.* This simply represents the historical cost of the investment. It must be adjusted for the income and dividends declared by the investee.
- (b) *Incorrect.* Dividends declared by the investee cause a reduction to the investment, not an increase.
- (d) *Incorrect.* Net income reported by the investee causes an increase to the investment, not a decrease.

**E2-3 Multiple-Choice Questions on Applying Equity Method  
[AICPA Adapted]**

1. **d** –  $\$250,000 + (\$100,000 \times 0.30) - (\$10,000 \times 0.30) = \$277,000$
2. **c** – 20X9 investment income:  $\$650,000 \times 30\% = \$195,000$ , 20X8 adjustment:  $(\$600,000 \times 10\%) - (\$200,000 \times 10\%) = \$40,000$ .
3. **d** – Because income is greater than the amount of dividends declared, the equity method would have resulted in a higher balance in the investment account, net earnings, and retained earnings than under the cost method.  
  
(a) *Incorrect.* Because the investor's portion of income (\$40,000) is greater than the portion of dividends (\$4,000), using the cost method would only result in an earnings increase of \$4,000 from dividend revenue rather than \$40,000. Thus, both net earnings and retained earnings would be understated.  
(b) *Incorrect.* The cost method does not record any increase to the investment account, thus its balance would be understated when compared to the equity method.  
(c) *Incorrect.* The cost method causes an understatement to the investment account, net earnings and retained earnings.
4. **d** – Under the equity method, dividends by the investee are recorded with a credit to the investment account, not to dividend revenue. By wrongly classifying this entry, the investment is overstated, and retained earnings are also overstated.  
  
(a) *Incorrect.* Because the dividend entry was recorded incorrectly, the financial position will not be correctly stated.  
(b) *Incorrect.* Because the dividends were recorded as dividend revenue, retained earnings would be overstated.  
(c) *Incorrect.* Currently, the investment is overstated because the dividends declared should have resulted in a reduction to the investment account.

**E2-4 Cost versus Equity Reporting**

a. Winston Corporation net income – cost method:

|      |           |   |               |                          |           |
|------|-----------|---|---------------|--------------------------|-----------|
| 20X2 | \$100,000 | + | .40(\$30,000) |                          | \$112,000 |
| 20X3 | \$ 60,000 | + | .40(\$60,000) |                          | 84,000    |
| 20X4 | \$250,000 | + | .40(\$20,000  | + \$25,000) <sup>a</sup> | 268,000   |

<sup>a</sup> Dividends paid from undistributed earnings of prior years  
 (\$70,000 + \$40,000 - \$30,000 - \$60,000 = \$20,000)  
 and \$25,000 earnings of current period.

b. Winston Corporation net income – equity method:

|      |           |   |               |           |
|------|-----------|---|---------------|-----------|
| 20X2 | \$100,000 | + | .40(\$70,000) | \$128,000 |
| 20X3 | \$ 60,000 | + | .40(\$40,000) | 76,000    |
| 20X4 | \$250,000 | + | .40(\$25,000) | 260,000   |

**E2-5 Acquisition Price**

Balance at date of acquisition:

a. Cost method    \$54,000 + \$2,800 = \$56,800

b. Equity method    \$54,000 - \$2,000 = \$52,000

| <u>Year</u>               | <u>Net Income</u> | <u>Dividends</u> | <u>Change in Investment Account</u> |                      |
|---------------------------|-------------------|------------------|-------------------------------------|----------------------|
|                           |                   |                  | <u>Cost Method</u>                  | <u>Equity Method</u> |
| 20X1                      | \$ 8,000          | \$15,000         | \$(2,800)                           | \$(2,800)            |
| 20X2                      | 12,000            | 10,000           |                                     | 800                  |
| 20X3                      | 20,000            | 10,000           |                                     | 4,000                |
| Change in account balance |                   |                  | <u>\$(2,800)</u>                    | <u>\$ 2,000</u>      |

**E2-6 Investment Income**

a. (1) Ravine Corporation net income under Cost Method:

|      |           |   |                                        |   |           |
|------|-----------|---|----------------------------------------|---|-----------|
| 20X6 | \$140,000 | + | 0.30(\$20,000)                         | = | \$146,000 |
| 20X7 | \$ 80,000 | + | 0.30(\$40,000)                         | = | \$ 92,000 |
| 20X8 | \$220,000 | + | 0.30(\$20,000 + \$10,000) <sup>a</sup> | = | \$229,000 |
| 20X9 | \$160,000 | + | 0.30(\$20,000)                         | = | \$166,000 |

<sup>a</sup> Dividends paid from undistributed earnings of prior years  
 (\$30,000 + \$50,000 - \$20,000 - \$40,000 = \$20,000) and \$10,000  
 earnings of current period.

(2) Ravine Corporation net income under Equity Method:

|      |           |   |                |   |           |
|------|-----------|---|----------------|---|-----------|
| 20X6 | \$140,000 | + | 0.30(\$30,000) | = | \$149,000 |
| 20X7 | \$ 80,000 | + | 0.30(\$50,000) | = | \$ 95,000 |
| 20X8 | \$220,000 | + | 0.30(\$10,000) | = | \$223,000 |
| 20X9 | \$160,000 | + | 0.30(\$40,000) | = | \$172,000 |

b. Journal entries recorded by Ravine Corporation in 20X8:

(1) Cost method:

|                            |        |       |
|----------------------------|--------|-------|
| Cash                       | 12,000 |       |
| Dividend Income            |        | 9,000 |
| Investment in Valley Stock |        | 3,000 |

a.

**Equity Method Entries on Peanut Co.'s Books:**

|                          |         |
|--------------------------|---------|
| Investment in Snoopy Co. | 300,000 |
| Cash                     | 300,000 |

Record the initial investment in Snoopy Co.

|                          |        |
|--------------------------|--------|
| Investment in Snoopy Co. | 75,000 |
| Income from Snoopy Co.   | 75,000 |

Record Peanut Co.'s 100% share of Snoopy Co.'s 20X8 income

|                          |        |
|--------------------------|--------|
| Cash                     | 20,000 |
| Investment in Snoopy Co. | 20,000 |

Record Peanut Co.'s 100% share of Snoopy Co.'s 20X8 dividend

b.

**Book Value Calculations:**

|                             | <u>Total<br/>Book<br/>Value</u> | = | <u>Common<br/>Stock</u> | + | <u>Retained<br/>Earnings</u> |
|-----------------------------|---------------------------------|---|-------------------------|---|------------------------------|
| <b>Beginning book value</b> | 300,000                         |   | 200,000                 |   | 100,000                      |
| <b>+ Net Income</b>         | 75,000                          |   |                         |   | 75,000                       |
| <b>- Dividends</b>          | (20,000)                        |   |                         |   | (20,000)                     |
| <b>Ending book value</b>    | 355,000                         |   | 200,000                 |   | 155,000                      |

**P2-23 (continued)****Basic Consolidation Entry**

|                          |         |
|--------------------------|---------|
| Common stock             | 200,000 |
| Retained earnings        | 100,000 |
| Income from Snoopy Co.   | 75,000  |
| Dividends declared       | 20,000  |
| Investment in Snoopy Co. | 355,000 |

**Optional accumulated depreciation consolidation entry**

|                          |        |
|--------------------------|--------|
| Accumulated depreciation | 10,000 |
| Buildings & equipment    | 10,000 |

The amount of this entry is found by looking at the depreciation expense (\$10,000) for the year and the accumulated depreciation at the end of the year (\$20,000). The difference must be what was in accumulated depreciation at the date of the acquisition. Note that this assumes there were no sales or other disposals of Buildings and equipment during the year.

|                   | Investment in<br>Snoopy Co. |         |           | Income from<br>Snoopy Co. |                |   |

Record Paper Co.'s 100% share of Scissor Co.'s 20X8 dividend

b.

**Book Value Calculations:**

|                             | <u>Total<br/>Book Value</u> | = | <u>Common<br/>Stock</u> | + | <u>Retained<br/>Earnings</u> |
|-----------------------------|-----------------------------|---|-------------------------|---|------------------------------|
| <b>Beginning book value</b> | 370,000                     |   | 250,000                 |   | 120,000                      |
| <b>+ Net Income</b>         | 93,000                      |   |                         |   | 93,000                       |
| <b>- Dividends</b>          | (25,000)                    |   |                         |   | (25,000)                     |
| <b>Ending book value</b>    | 438,000                     |   | 250,000                 |   | 188,000                      |

**P2-25 (continued)****Basic Consolidation Entry**

|                                  |                |                |
|----------------------------------|----------------|----------------|
| <b>Common stock</b>              | <b>250,000</b> |                |
| <b>Retained earnings</b>         | <b>120,000</b> |                |
| <b>Income from Scissor Co.</b>   | <b>93,000</b>  |                |
| <b>Dividends declared</b>        |                | <b>25,000</b>  |
| <b>Investment in Scissor Co.</b> |                | <b>438,000</b> |

**Optional accumulated depreciation consolidation entry**

|                                  |               |               |
|----------------------------------|---------------|---------------|
| <b>Accumulated depreciation</b>  | <b>24,000</b> |               |
| <b>Buildings &amp; equipment</b> |               | <b>24,000</b> |

The amount of this entry is found by looking at the depreciation expense (\$12,000) for the year and the accumulated depreciation at the end of the year (\$36,000). The difference must be what was in accumulated depreciation at the date of the acquisition. Note that this assumes there were no sales or other disposals of Buildings and equipment during the year.

|                          |         |         |
|--------------------------|---------|---------|
| Investment in Snoopy Co. | 300,000 |         |
| Cash                     |         | 300,000 |

Record the initial investment in Snoopy Co.

|                 |        |        |
|-----------------|--------|--------|
| Cash            | 20,000 |        |
| Dividend Income |        | 20,000 |

Record Peanut Co.'s 100% share of Snoopy Co.'s 20X8 dividend

b.

**Book Value Calculations:**

|                     | <u>Total<br/>Book Value</u> | = | <u>Common<br/>Stock</u> | + | <u>Retained<br/>Earnings</u> |
|---------------------|-----------------------------|---|-------------------------|---|------------------------------|
| Original book value | 300,000                     |   | 200,000                 |   | 100,000                      |

**P2-27B (continued)****Investment consolidation entry**

|                                 |                |                |
|---------------------------------|----------------|----------------|
| <b>Common stock</b>             | <b>200,000</b> |                |
| <b>Retained earnings</b>        | <b>100,000</b> |                |
| <b>Investment in Snoopy Co.</b> |                | <b>300,000</b> |

**Dividend consolidation entry**

|                           |               |               |
|---------------------------|---------------|---------------|
| <b>Dividend income</b>    | <b>20,000</b> |               |
| <b>Dividends declared</b> |               | <b>20,000</b> |

**Optional accumulated depreciation consolidation entry**

|                                  |               |               |
|----------------------------------|---------------|---------------|
| <b>Accumulated depreciation</b>  | <b>10,000</b> |               |
| <b>Buildings &amp; equipment</b> |               | <b>10,000</b> |

The amount of this entry is found by looking at the depreciation expense (\$10,000) for the year and the accumulated depreciation at the end of the year (\$20,000). The difference must be what was in accumulated depreciation at the date of the acquisition. Note that this assumes there were no sales or other disposals of Buildings and equipment during the year.
