- d. teaching concepts to a classmate

ANSWER: a

9. The Discovery Wheel is a picture of how you view your strengths and weaknesses as a student today.

- a. True
- b. False
- a. True
- b. False

ANSWER: True

10. An ingredient to success is for students to connect their learning style to school, to their major, and to their future career(s).

- a. True
- b. False
- a. True
- b. False

ANSWER: True

11. Motivation can come simply from being clear about your goals and acting on them.

- a. True
- b. False
- a. True
- b. False

ANSWER: True

12. People who favour processing information by reflective observation prefer to jump in and start doing things immediately.

- a. True
- b. False
- a. True
- b. False

ANSWER: False

13. People who favour perceiving by abstract conceptualization analyze, intellectualize, and create theories.

- a. True
- b. False
- a. True

Chapter 1 - First Steps

b. False

ANSWER: True

14. Learning styles are closely matched to certain careers.

a. True

b. False

a. True

b. False

ANSWER: False

15. Learning style awareness is most useful when it leads to changes in behaviour.

a. True

b. False

a. True

b. False

ANSWER: True

16. Learning style is a term that accounts for differences in how people prefer to _____ and _____ information.

ANSWER: perceive, process (or process, perceive)

17. People who favour perceiving by _____ like to absorb information through their senses.

ANSWER: concrete experiences

18. Explain why motivation is often misunderstood and describe three strategies to improve motivation.

ANSWER: The text lists and describes a number of strategies to improve motivation. The key is to get beyond the mistaken impression that certain people are born with motivation and others are not. Rather, motivation should be viewed as a habit to develop through the use of strategies, such as: Being clear about your goals and acting on them ("Promise it"); embracing your discomfort with tasks ("Befriend your discomfort"); planting new thoughts in your mind ("Change your mind—and your body"); tricking yourself by moving due dates ahead ("Turn up the pressure"); chunking large projects into smaller, more doable ones ("Turn down the pressure"); having others help you overcome your procrastination ("Ask for support"); modelling the behaviours of others ("Adopt a model"); determining the costs of putting things off ("Compare the payoffs to the costs"); and determining a schedule for getting it done later ("Do it later").

19. Explain how metacognition allows students the flexibility to learn in a variety of situations and from a variety of instructors.

ANSWER: Metacognition is essentially thinking about thinking and learning about learning. By understanding how we learn and think, we can learn to adapt our learning style to a variety of learning environments and a variety of instructor styles. In this way, through metacognition, we can monitor our behaviour and habits and modify our strategies and approaches to various situations and instructors. As the text explains, with metacognition, we become our own best teachers.

20. The Power Process for this chapter claims that ideas are tools. Explain why it is best to approach the ideas and strategies in the text as tools in a toolbox.

ANSWER: No one tool works in all situations. In the same way that a mechanic has a variety of tools for a variety of different tasks, so, too, do master students have a variety of strategies to employ in a variety of learning situations. Thus, students should look at the strategies and ideas presented in the text as tools to try; some of

Name: _____ Class: _____ Date: _____

Chapter 1 - First Steps

which may work and some which may not. The key is to give them a try. If they work, then add them to the learning “toolbox.” If not, then file them away for a future scenario in which they may be useful.
