Synopsis of Chapter Revisions

NEW opener—Fitbit and entrepreneurial assignment.

New visual for process to get from transactions to financial statements.

New layout on four types of accounts that determine equity.

Improved presentation of “Double-Entry System” section.

Updated Apple data for NTK 2-4.

Updated debt ratio analysis using Costco and Walmart.

New Cheat Sheet reinforces chapter content.

Added four new Quick Studies.

Added three new Exercises.

Added new analysis assignments: Company Analysis, Comparative Analysis, and Global Analysis.

Chapter Outline

I. Basis of Financial Statements—process to go from transactions and events to financial statements includes the following:

1. Identify each transaction and event from source documents, which identify and describe transactions and events entering the accounting process.
2. Analyze each transaction and event using the accounting equation.
3. Record relevant transactions and events in a journal.
4. Post journal information to ledger accounts.
5. Prepare and analyze the trial balance and financial statements.
 - a. Source Documents—identify and describe transactions and events entering the accounting system.

II. The “Account” Underlying Financial Statements

An *account* is a record of increases and decreases in a specific asset, liability, equity, revenue, or expense. Account categories include:

1. *Assets*—resources owned or controlled by a company that have future economic benefit. Examples include Cash, Accounts Receivable, Note Receivable, Prepaid Expenses, Prepaid Insurance, Supplies, Store Supplies, Equipment, Buildings, and Land.
 - a. Accounts Receivable – promises of payment from customers.
 - b. Prepaid accounts – assets from prepayments of future expenses expected to be incurred in future accounting periods.
2. *Liabilities*—claims (by creditors) against assets, which means they are obligations to transfer assets or provide products or services to others. Examples include Accounts Payable, Note Payable, Unearned Revenues, and Accrued Liabilities.
 - a. Accounts Payable—promises to pay later usually arising from purchase of inventory or other assets.
 - b. Notes Payable—written promissory note to pay a future amount.
 - c. Unearned revenue—revenue collected before it is earned/ before services or goods are provided.
 - d. Accrued liabilities—amounts owed that are not yet paid.
3. *Equity*—an owner’s claim on a company’s assets is called *equity* or *owner’s equity*. Examples include owner’s capital, owner’s withdrawals (decreases equity), Revenues from providing goods or services; i.e., Sales, Fees Earned, (increases equity), and Expenses from assets or services used in operation; i.e., Supplies Expense, (decreases equity).

III. Ledger and Chart of Accounts

1. The *general ledger* or *ledger* (referred to as the *books*) is a collection of all accounts and their balances for an accounting system.
2. The *chart of accounts* is a list of all accounts in the ledger with their identification numbers.

IV. Double-Entry Accounting

Double-entry accounting demands the accounting equation remain in balance. This means that for each transaction (1) at least two accounts are involved with at least one debit and one credit and (2) total amount debited must equal the total amount credited.

A. Debits and Credit

1. A *T-account* represents a ledger account and is used to understand the effects of one or more transactions. It is shaped like the letter T with the account title on top.
2. The *left* side of an account is called the *debit* side. A debit is an entry on the left side of an account.
3. The *right* side of an account is called the *credit* side. A credit is an entry on the right side of an account.
4. Accounts are *assigned balance sides* based on their classification or type.
5. To *increase* an account, an amount is placed on the *balance side*, and to *decrease* an account, the amount is placed on the *side opposite its assigned balance side*.
6. The *account balance* is the difference between the total debits and the total credits recorded in that account. When total debits exceed total credits, the account has a *debit balance*. When total credits exceed total debits, the account has a *credit balance*. When total debits equal total credits, the account has a *zero balance*.

B. Double-Entry System—requires that each transaction affect, and be recorded in, at least two accounts. The total debits must equal the total credits for each transaction.

1. The assignment of balance sides (debit or credit) follows the accounting equation.
 - a. *Assets* are on the *left side* of the equation; therefore, the left, or *debit*, side is the normal balance for assets.
 - b. *Liabilities and equities* are on the *right side*; therefore, the right, or *credit*, side is the normal balance for liabilities and equity.
 - c. *Withdrawals, revenues, and expenses* really are changes in equity, but it is necessary to set up temporary accounts for each of these items to accumulate data for statements. Withdrawals and expense accounts really represent decreases in equity; therefore, they are assigned debit balances. *Revenue* accounts really represent increases in equity; therefore, they are assigned credit balances.

V. Analyzing and Processing Transactions

A. Journalizing and Posting Transactions

Four steps in processing transactions are as follows:

1. Identify transactions and source documents.
2. Analyze transactions using the accounting equation. Apply double-entry accounting to determine account to be debited and credited.
3. Record journal entry—recorded chronologically. (A journal gives us a complete record of each transaction in one place.)
 - a. A *General Journal* is the most flexible type of journal because it can be used to record any type of transaction.
 - b. When a transaction is recorded in the General Journal, it is called a *journal entry*. A journal entry that affects more than two accounts is called a compound journal entry.
 - c. Each journal entry must contain equal debits and credits.
4. Post entry to ledger—process of transferring entries from the journal to the ledger.
 - a. Debits are posted as debit, and credits as credits to the accounts identified in the journal entry.
 - b. Actual accounting systems use *balance column accounts* rather than T-accounts in the ledger.
 - c. A *balance column account* has debit and credit columns for recording entries and a third column for showing the balance of the account after each entry is posted.

VI. Trial Balance

- A. A *trial balance* is a list of all ledger accounts and their balances (either debit or credit) at a point in time. Account balances are reported in their appropriate debit or credit columns of the trial balance.
- B. The trial balance tests for the equality of the debit and credit account balances as required by double-entry accounting.
- C. Preparing a Trial Balance: three steps to prepare a trial balance are as follows:
 - 1. List each account and its amount (from the ledger).
 - 2. Compute the total of debit balances and the total of credit balances.
 - 3. Verify (prove) total debit balances equal total credit balances.
- D. Searching for Errors: when a trial balance does not balance, an error has occurred and must be corrected. Follow these steps:
 - 1. Verify that the trial balance columns are correctly added.
 - 2. Verify that account balances are accurately entered from the ledger.
 - 3. See whether a debit (or credit) balance is mistakenly listed in the trial balance as a credit (or debit).
 - 4. Recompute each account balance in the ledger.
 - 5. Verify that each journal entry is properly posted.
 - 6. Verify that the original journal entry has equal debits and credits.

Note: Any errors must be located and corrected before preparing the financial statements. Financial statements prepared from the trial balance are actually *unadjusted* statements. The purpose, content and format for each statement was presented in Chapter 1. The next chapter will address adjustments.

- D. Presentation Issues
 - 1. Dollar signs are not used in journals and ledgers, but do appear in financial statements and other reports such as trial balances.
 - 2. Usual practice on statements is to put dollar signs before only the first and last numbers in each column.
 - 3. Commas are optional except for financial reports, where they are always used.
 - 4. Companies commonly round amounts in reports to the nearest dollar, or even to a higher level.
 - 5. Double rule the final total(s) on the financial statements.

VI. Decision Analysis—Debt Ratio

- A. Companies finance their assets with either liabilities or equity.
- B. A company that finances a relatively large portion of its assets with liabilities has a high degree of financial leverage (greater risk).
- C. The debt ratio describes the relationship between a company's liabilities and assets. It is calculated as total liabilities divided by total assets.
- D. The debt ratio tells us how much (what percentage) of the assets are financed by creditors (nonowners), or liability financing. The higher this ratio, the more risk a company faces, because liabilities must be repaid and often require regular interest payments.

Chapter 2 Alternate Demonstration Problem

Record the following transactions of Speedy Computer Service, owned by Bill Smith, for the month of March 2019.

Mar 1. Bill Smith invested \$3,000 cash to start the business.

- 15. Bill provided services and received cash amounting to \$5,400 from customers.**
- 16. Purchased supplies on account, \$100.**
- 17. Paid for gas and oil, \$800.**
- 18. Paid salaries, \$5,000.**
- 21. Provided service on credit, \$600.**
- 28. Bill provided services and received cash amounting to \$6,000.**
- 29. Paid for truck and equipment rental, \$2,500.**
- 30. Bill Smith withdrew cash of \$2,000 for his personal use.**

Required:

- 1. Record the above transactions in general journal form.**
- 2. Prepare a trial balance after posting the entries to T-accounts (you can make your own T-accounts).**
- 3. Prepare an income statement from trial balance.**
- 4. Prepare a statement of owner's equity from the trial balance and income statement.**
- 5. Prepare a balance sheet using the trial balance totals and the statement of owner's equity.**
- 6. Explain why the company's cash balance does not agree with net income.**

6. First, note that the owner investment (\$3,000) and cash withdrawals (\$2,000) affect the cash balance but do not affect the amount of net income earned during the period. Also, revenues in the amount of \$600 (March 21) are reflected in net income, but have not yet been collected. As such, these revenues did not impact the cash balance.

Chapter 2

Analyzing and Recording Transactions

QUESTIONS

1.
 - a. Common asset accounts: cash, accounts receivable, notes receivable, prepaid expenses (rent, insurance, etc.), office supplies, store supplies, equipment, building, and land.
 - b. Common liability accounts: accounts payable, notes payable, and unearned revenue, wages payable, and taxes payable.
 - c. Common equity accounts: owner, capital and owner, withdrawals.
2. A note payable is formal promise, usually denoted by signing a promissory note to pay a future amount. A note payable can be short-term or long-term, depending on when it is due. An account payable also references an amount owed to an entity. An account payable can be oral or implied, and often arises from the purchase of inventory, supplies, or services. An account payable is usually short-term.
3. There are several steps in processing transactions: (1) Identify and analyze the transaction or event, including the source document(s), (2) apply double-entry accounting, (3) record the transaction or event in a journal, and (4) post the journal entry to the ledger. These steps would be followed by preparation of a trial balance and then with the reporting of financial statements.
4. A general journal can be used to record any business transaction or event.
5. Debited accounts are commonly recorded first. The credited accounts are commonly indented.
6. A transaction is first recorded in a journal to create a complete record of the transaction in one place. (The journal is often referred to as the book of original entry.) This process reduces the likelihood of errors in ledger accounts.
7. Expense accounts have debit balances because they are decreases to equity (and equity has a credit balance).
8. The recordkeeper prepares a trial balance to summarize the contents of the ledger and to verify the equality of total debits and total credits. The trial balance also serves as a helpful internal document for preparing financial statements and other reports.
9. The error should be corrected with a separate (subsequent) correcting entry. The entry's explanation should describe why the correction is necessary.

10. The four financial statements are: income statement, balance sheet, statement of owner's equity, and statement of cash flows.
11. The balance sheet provides information that helps users understand a company's financial position at a point in time. Accordingly, it is often called the statement of financial position. The balance sheet lists the types and dollar amounts of assets, liabilities, and equity of the business.
12. The income statement lists the types and amounts of revenues and expenses, and reports whether the business earned a net income (also called profit or earnings) or a net loss.
13. An income statement user must know what time period is covered to judge whether the company's performance is satisfactory. For example, a statement user would not be able to assess whether the amounts of revenue and net income are satisfactory without knowing whether they were earned over a week, a month, a quarter, or a year.
14. (a) Assets are probable future economic benefits obtained or controlled by a specific entity as a result of past transactions or events. (b) Liabilities are probable future sacrifices of economic benefits arising from present obligations of a particular entity to transfer assets or provide services to other entities in the future as a result of past transactions or events. (c) Equity is the residual interest in the assets of an entity that remains after deducting its liabilities.
15. The balance sheet is sometimes referred to as the statement of financial position.
16. Debit balance accounts on the Apple balance sheet include: Cash and cash equivalents; Short-term marketable securities; Accounts receivable; Inventories; Vendor non-trade receivables; Other current assets; Long-term marketable securities; Property, plant and equipment, net; Goodwill; Acquired intangible assets, net; Other non-current assets.

Credit balance accounts on the Apple balance sheet include: Accounts payable; Accrued expenses; Deferred revenue; Commercial paper; Current portion of long-term debt; Deferred revenue, non-current; Long-term debt; Other non-current liabilities; Common stock; Retained earnings; Accumulated other comprehensive income (current year abnormal debit balance).
17. The asset accounts with *receivable* in its account title are: Accounts receivable, net; Income taxes receivable, net. The liabilities with *payable* in the account title are: Accounts payable; Income taxes payable, net; Income taxes payable, non-current.
18. Samsung's balance sheet lists the following current liabilities: Trade payables; Short-term borrowings; Other payables; Advances received; Withholdings; Accrued expenses; Income tax payable; Current portion of long-term liabilities; Provisions; Other current liabilities; Liabilities held-for-sale.

Samsung's balance sheet lists the following noncurrent liabilities: Debentures; Long-term borrowings; Long-term other payables; Net defined benefit liabilities; Deferred income tax liabilities; Provisions; Other non-current liabilities.

Quick Study 2-8 (10 minutes)

The correct answer is a.

Explanation: If a \$2,250 debit to Utilities Expense is incorrectly posted as a credit, the effect is to understate the Utilities Expense debit balance by \$4,500. This causes the Debit column total on the trial balance to be \$4,500 less than the Credit column total.

Quick Study 2-15 (10 minutes)

Debt ratio = Total liabilities / Total assets = \$38,633 mil / \$42,966 mil = 89.9%

Interpretation: Its debt ratio of 89.9% exceeds the 60% of its competitors. Home Depot's financial leverage, and accordingly its riskiness, can be judged as above average based on the debt ratio.

2. Transactions a, c, and e did not yield an expense for the following reasons:

- e This transaction is a distribution of cash to the owner. Even though equity decreased, that decrease did not occur in the process of providing goods or services to customers.
- a This transaction decreased cash in settlement of a previously existing liability (equity did not change). Supplies expense is recorded when assets are used, not necessarily when cash is paid.
- c This transaction involves the purchase of an asset. The form of the company's assets changed, but total assets did not (and equity did not change).

2. Transactions a, c, d, and e did not yield revenue for the following reasons:

- d This transaction changed the form of an asset from receivable to cash. Total assets were not increased (revenue was recognized when the services were originally provided).
- e This transaction brought in cash (increased assets), and it also increased a liability by the same amount (represented by the signing of a note to repay the amount).
- a This transaction brought in cash, but this is an owner investment.
- c This transaction brought in cash, but it created a liability to provide services to the client in the next year.

Exercise 2-15 (20 minutes)

Calculation of change in equity for part a through part d

	Assets	-	Liabilities	=	Equity
Beginning of the year	\$ 60,000	-	\$20,000	=	\$40,000
End of the year	105,000	-	36,000	=	<u>69,000</u>
Net increase in equity					<u>\$29,000</u>

a.	Net income	\$	?
	Plus owner investments		0
	Less owner withdrawals		<u>(0)</u>
	Change in equity		<u>\$29,000</u>

Net Income = \$29,000

Since there were no additional investments or withdrawals, the net income for the year equals the net increase in owner's equity.

b.	Net income	\$	?
	Plus owner investments		0
	Less owner withdrawals (\$1,250/mo. x 12 mo.)		<u>(15,000)</u>
	Change in equity		<u>\$29,000</u>

Net Income = \$44,000

The withdrawals were added back because they reduced equity without reducing net income.

c.	Net income	\$	?
	Plus owner investment		55,000
	Less withdrawals by owner		<u>(0)</u>
	Change in equity		<u>\$29,000</u>

Net Loss = \$26,000

The investment was deducted because it increased equity without creating net income.

d.	Net income	\$	?
	Plus owner investment		35,000
	Less owner withdrawals (\$1,250/mo. X 12 mo.)		<u>(15,000)</u>
	Change in equity		<u>\$29,000</u>

Net Income = \$9,000

The withdrawals were added back because they reduced equity without reducing net income and the investments were deducted because they increased equity without creating net income.

g. \$1,390 debit to Store Supplies is not posted.	\$1,390	Credit	Store Supplies	Store Supplies is understated by \$1,390

Exercise 2-21 (15 minutes)

	Overstated, Understated, or Correctly-Stated	Amount
a.	<u>Correctly-stated.</u> The debit column is correctly stated because the erroneous debit (to Accounts Payable) is deducted from an account with a (larger assumed) credit balance.	\$0
b.	<u>Understated.</u> The credit column is understated by \$37,900 because Accounts Payable was debited — it should have been credited.	\$37,900
c.	<u>Correctly-stated.</u> The Automobiles account balance is correctly stated.	\$0
d.	<u>Understated.</u> The Accounts Payable account balance is understated by \$37,900. It should have been increased (credited) by \$18,950 but the posting error decreased (debited) it by \$18,950.	\$37,900
e.	The credit column is \$37,900 less than the debit column, or \$162,100 in total (\$200,000 - \$37,900).	

Exercise 2-22 (15 minutes)a.

Company	Liabilities	/	Assets	=	Debt Ratio
Dreamworks	\$ 30,000		\$ 40,000		0.75
Pixar	147,000		150,000		0.98
Universal	17,000		68,000		0.25

- b. Pixar has the largest financial leverage because it has the larger debt ratio in comparison to both Dreamworks and Universal.

Computation of 2019 net income:

Owner investment	35,000
Add net income	<u>?</u>
Deduct withdrawals by owner.....	<u>(19,000)</u>
Increase in equity during the year	<u>\$ 22,000*</u>

Thus, net income = (\$22,000 + \$19,000 - \$35,000) = \$ 6,000

* Computation of 2019 equity increase:

Equity, December 31, 2018	\$282,200
Equity, December 31, 2019	<u>(304,200)</u>
Increase in equity during 2019	<u>\$ 22,000</u>

Computation of 2019 net income:

Owner investment	5,000
Add net income	?
Deduct withdrawals by owner.....	<u>(3,000)</u>
Increase in equity during the year	<u>\$ 13,000*</u>

Thus, net income = (\$13,000 + \$3,000 - \$5,000) = \$ 11,000

* Computation of 2019 equity increase:

Equity, December 31, 2018	\$137,000
Equity, December 31, 2019	<u>(150,000)</u>
Increase in equity during 2019	<u>\$ 13,000</u>

Explanation: Apple has greater financial leverage when a greater proportion of its assets are financed by liabilities. Additionally, Apple's financing structure is more risky when it utilizes more leverage.

Comparative Analysis — AA 2-2 (25 minutes)

\$ millions

1. **Apple**

Current year debt ratio: $\$241,272 / \$375,319 = \underline{64.3\%}$

Prior year debt ratio: $\$193,437 / \$321,686 = \underline{60.1\%}$

2. **Google**

Prior year debt ratio: $\$28,461 / \$167,497 = \underline{17.0\%}$

3. **Apple**

Explanation: Apple has the higher degree of financial leverage. Apple's debt ratio is markedly higher for the current year than that of Google. This indicates that Apple carries more debt financing than Google. This also implies that Apple is attempting to use nonowner financing to make more money for its owners. This is fine provided Apple's return does not decline below that of what it pays nonowners for use of that money—this is the main source of financing risk.

2. Increased financial leverage

3. (a) Less Risky *Explanation:* Samsung's debt ratio of 28.9% is lower than Apple's debt ratio of 64.3% (\$241,272/\$375,319).

(b) More Risky *Explanation:* Samsung's debt ratio of 28.9% is higher than Google's debt ratio of 22.7% (\$44,793/\$197,295).

Ethics Challenge — BTN 2-1

This case involves a conflict between the need for efficiency and the need for control. While it makes sense to take and process lunch orders quickly, this efficiency is being accomplished by a shortcut that greatly weakens control over cash receipts. Cash could be received and lost or stolen because there would be no initial record of how much was received.

The assistant manager's explanation about the head manager not arriving until 3 o'clock suggests that the head manager doesn't know about the proposed shortcut. Thus, the new employee is faced with the dilemma of deciding whether to accept the assistant manager's instructions, suggest to the assistant manager that the shortcut seems wrong, or to ask the head manager to confirm the instructions. Each of these alternatives involves personal risk.

It is possible that the assistant manager does not understand the potential for fraud and abuse if this shortcut is used. If the relationship between you and the assistant manager is such that you feel you can do so, you should explain your understanding of how the shortcut could lead to the problems of inaccurate records for tax purposes, gathering inaccurate marketing information, and abuse by other employees who might not be as honest as you and the assistant manager.

If the assistant manager insists, you may want to work as instructed to get an idea of whether the shortcut is being abused by the assistant manager and perhaps to find out discreetly whether the head manager knows about it. (Although, this behavior does involve personal risk of perceived collusion with the assistant manager.) If you conclude that the assistant manager is committing fraud, you should report the situation to the head manager as quickly as possible.

Communicating in Practice — BTN 2-2

MEMORANDUM

To: Lila Corentine
 From: _____
 Subject: Financial statements explanation
 Date: _____

The four major financial statements and their purposes are:

- ***Income statement*** describes a company's revenues and expenses along with the resulting net income or loss over a period of time. It helps explain how equity changes during a period due to earnings activities.
- ***Statement of owner's equity*** explains changes in equity due to net income (or net loss) and any withdrawals and or owner investments over a period of time.
- ***Balance sheet*** describes a company's financial position (assets, liabilities, and equity) at a point in time.
- ***Statement of cash flows*** identifies cash inflows (receipts) and outflows (payments) over a period of time. It also explains how the cash balance on the balance sheet changed from the beginning to the end of a period.

These financial statements are linked to each other across time.

Specifically, a balance sheet reports an organization's financial position at a ***point in time***. The income statement, statement of owner's equity, and statement of cash flows report on performance over a ***period of time***. These three statements link balance sheets from the beginning to the end of a reporting period. That is, they explain how the financial position of an organization changes from one point to another.

Taking It to the Net — BTN 2-3

1. The prior three years' net income or (loss) for Amazon are (\$ millions):
 2016 = \$2,371 2015 = \$596 2014 = \$(241)
2. The three years net cash *provided* by operations follows (\$ millions):
 2016 = \$16,443 2015 = \$11,920 2014 = \$6,842
3. The reason its cash balance only increased by \$3,444 million in 2016 was because of net cash outflows of \$9,876 million for its investing activities and \$2,911 million for its financing activities (and further reduced by \$212 million related to foreign currency effects). Those uses of cash absorbed much of the cash generated by its operating activities.

Teamwork in Action — BTN 2-4

<Instructor note: There is no specific solution to this activity.>

The following sample solution gives a summary outline of what a minimum report needs to include. Assume a team member selects assets:

Category: Assets

- a. Increases (decreases) in assets are debits (credits) to asset accounts. Debit means left side, credit means right side. The normal side of an account refers to the side where increases are recorded. For assets, this is the debit, or left, side.
- b. Owner investment of \$10,000 cash in business.
- c. $\text{Assets} = \text{Liabilities} + \text{Owner, Capital} - \text{Withdrawals} + \text{Revenues} - \text{Expenses}$
 $+ \$10,000 = \quad \$0 \quad + \quad \$10,000 \quad - \quad \$0 \quad + \quad \$0 \quad - \quad \0
 Owner investments have no effect on the income statement, but they do increase the cash flows from financing by \$10,000 on the statement of cash flows (this increases its net cash flow).
- d. Paid rent expense with \$2,000 cash.
- e. $\text{Assets} = \text{Liabilities} + \text{Owner, Capital} - \text{Withdrawals} + \text{Revenues} - \text{Expenses}$
 $- \$2,000 = \quad \$0 \quad + \quad \$0 \quad - \quad \$0 \quad + \quad \$0 \quad - \quad \$2,000$
 An expense paid in cash will decrease net income on the income statement and decrease operating cash flows on the statement of cash flows.

Entrepreneurial Decision — BTN 2-5

There are several issues that ownership should consider. Those considerations include the following three issues (among others).

- If ownership chooses to contribute personal funds for the expansion, ownership money will be at risk (not business loans); in this case, the business will not have the expense of interest payments, nor will the business have the risk of the inability to repay a loan.
- If ownership chooses to have the business borrow the money, the business will have interest and loan payments to make, and the business will have more risk (as reflected in the company's debt ratio).
- If the business can pay the interest and loan payments, it can be to the business's advantage to borrow, as long as the return on assets is high enough (that is, higher than the rate of interest on the borrowing).

Entrepreneurial Decision — BTN 2-6

1.

MARTIN MUSIC SERVICES Balance Sheet December 31

Assets		Liabilities	
Cash.....	\$ 3,600	Accounts payable.....	\$ 2,200
Accounts receivable	9,600	Unearned lesson fees	<u>15,600</u>
Prepaid insurance	1,500	Total liabilities	17,800
Prepaid rent	9,400		
Store supplies.....	6,600		
Equipment	<u>50,000</u>	Equity	
Total assets.....	<u>\$80,700</u>	Total equity	<u>62,900</u>
		Total liabilities and equity	<u>\$80,700</u>

2.

Debt ratio = Total liabilities / Total assets = \$17,800 / \$80,700 = 22.1%

Return on assets = Net income/Average assets = \$40,000/\$80,700* = 49.6%

*Ending balance is used per instructions ("assume average assets equal its ending balance").

3. The prospects of a bank loan are likely to be good. (i) The debt ratio indicates that 78% of the company's funding is from equity. Also, there are no debt obligations requiring periodic payments. This implies low risk. (ii) The level of return on assets is very high. This implies good return.

Overall, given the information and the assumption that current performance will continue into the future, the prospects of a bank loan are good.

Note: The loan does carry some risk—fueling this risk are (i) poor recordkeeping, (ii) lack of information on growth potential, and (iii) a much higher pro forma debt ratio—that is, if the loan is granted, the debt ratio will jump to 43%, computed as:

$$(\$17,800 + \$30,000) / (\$80,700 + \$30,000).$$

Hitting the Road — BTN 2-7

Findings will vary. It is advisable that the instructor obtain a few classified sections from newspapers that were published over the period of the assignment. If student reports lack responses for question 2, it is informative and motivating to bring these (accounting-related job opportunities) sections to class when discussing or returning student reports as many students are not accounting majors.

Analyzing and Recording Transactions

Chapter 2

Wild and Shaw

Fundamental Accounting Principles

24th Edition

Chapter 2 Learning Objectives

CONCEPTUAL

- C1** Explain the steps in processing transactions and the role of source documents.
- C2** Describe an account and its use in recording transactions.
- C3** Describe a ledger and a chart of accounts.
- C4** Define *debits* and *credits* and explain double-entry accounting.

ANALYTICAL

- A1** Analyze the impact of transactions on accounts and financial statements.
- A2** Compute the debt ratio and describe its use in analyzing financial condition.

PROCEDURAL

- P1** Record transactions in a journal and post entries to a ledger.
- P2** Prepare and explain the use of a trial balance.
- P3** Prepare financial statements from business transactions.

Learning Objective C1

Explain the steps in processing transactions and the role of source documents.

Basics of Financial Statements

Business transactions and events are the starting points of financial statements. Process from transactions to financial statements is as follows:

- Identify each transaction and event from source documents.
- Analyze each transaction and event using the accounting equation.
- Record relevant transactions and events in a journal.
- Post journal information to ledger accounts.
- Prepare and analyze the trial balance and financial statements.

Source Documents

Source documents identify and describe transactions entering the accounting system.

Examples:

- Bills from suppliers
- Sales receipts
- Checks
- Purchase orders
- Payroll records
- Bank statements

Learning Objective C2

Describe an account and its use in recording transactions.

The Account Underlying Financial Statements

An **account** is a record of increases and decreases in a specific asset, liability, equity, revenue, or expense.

The **general ledger** is a record of all accounts used by the company.

Equity Accounts

Expanded Accounting Equation

Revenues and Owner capital increases equity.
Expenses and Owner withdrawals decrease equity.

Learning Objective C3

Describe a ledger and chart of accounts.

Ledger and Chart of Accounts

The ledger is a collection of all accounts and their balances for an accounting system. A company's size and diversity of operations affect the number of accounts needed.

The chart of accounts is a list of all accounts and includes an identifying number for each account.

**Exhibit

Learning Objective C4

Define debits and credits and
explain double-entry
accounting.

Debits and Credits

A T-account represents a ledger account and is used to show the effects of one or more transactions.

- (B) Enter the debit account number from the ledger in the PR column of the journal (blue line).
- (C) Identify credit account in ledger: enter date, journal page, amount, and balance (gold line).
- (D) Enter the credit account number from the ledger in the PR column of the journal (green line).

Learning Objective A1

Analyze the impact of transactions on accounts and financial statements.

Processing Transactions

Double-entry accounting is useful in analyzing and processing transactions. Analysis of each transaction follows these four steps.

- Step 1** Identify the transaction and any source documents.
- Step 2** Analyze the transaction using the accounting equation.
- Step 3** Record the transaction in journal entry form applying double-entry accounting.
- Step 4** Post the entry (for simplicity, we use T-accounts to represent ledger accounts).

Exhibit 2.13

Accounts in this white area are on the income statement.

Learning Objective P2

Prepare and explain the use of a trial balance.

Preparing a Trial Balance

Preparing a trial balance has three steps:

1. List each account title and its amount (from ledger) in the trial balance. If an account has a zero balance, list it with a zero in the normal balance column (or omit it entirely).
2. Compute the total of debit balances and the total of credit balances.
3. Verify (prove) total debit balances equal total credit balances.

Salaries expense.....	1,400	
Rent expense.....	1,000	
Utilities expense.....	305	
Totals.....	<u>\$45,300</u>	<u>\$45,300</u>

The trial balance lists all ledger accounts and their balances at a point in time. If the books are in balance, the total debits will equal the total credits.

Searching for Errors

If the trial balance does not balance, the error(s) must be found and corrected.

① Make sure the trial balance columns are correctly added.

② Make sure account balances are correctly entered from the ledger.

③ See if debit or credit accounts are mistakenly placed on the trial balance.

④ Recompute each account balance in the ledger.

⑤ Verify that each journal entry is posted correctly.

⑥ Verify that each original journal entry has equal debits and credits.

Learning Objective P3

Prepare financial statements
from business transactions.

Financial Statements Prepared from Trial Balance

Exhibit
2.15

Financial Statements

The four financial statements and their purposes are:

- 1. Income statement** — reports revenues less expenses incurred by a business over a period of time.
- 2. Statement of owner's equity** — reports how equity changes over the reporting period from net income (or loss) and from any owner investments and withdrawals over a period of time.
- 3. Balance sheet** — reports the financial position (types and amounts of assets, liabilities, and equity) at a point in time.
- 4. Statement of Cash Flows** — The statement of cash flows lists the cash inflows and cash outflows for the period.

For simplicity, we do not show the statement of cash flows for FastForward in this chapter, but we do return to this statement in the next chapter.

Presentation Issues

1. Dollar signs are not used in journals and ledgers.
2. Dollar signs appear in financial statements and other reports such as trial balances. Put dollar signs beside only the first and last numbers in a column.
3. When amounts are entered in the journal, ledger, or trial balance, commas are optional to indicate thousands, millions, and so forth.
4. Commas are always used in financial statements.
5. Companies commonly round amounts in reports to the nearest dollar, or even to a higher level.

Learning Objective A2

Compute the debt ratio and describe its use in analyzing financial condition.

Debt Ratio - Equation

$$\text{Debt Ratio} = \frac{\text{Total Liabilities}}{\text{Total Assets}}$$

Evaluates the level of debt risk.

A higher ratio indicates that there is a greater probability that a company will not be able to pay its debt in the future.

Debt Ratio - Computation

$$\text{Debt Ratio} = \frac{\text{Total Liabilities}}{\text{Total Assets}}$$

\$ millions	Current Year	1 Year Ago	2 Years Ago
Total liabilities	\$25,268	\$20,831	\$22,174
Total assets	\$36,347	\$33,163	\$33,017
Debt ratio	0.70	0.63	0.67
Walmart debt ratio	0.59	0.58	0.58
